

I purchased XM radio about 2 months ago, and I have not returned to regular FM radio since. Where else can I get great variety great reception and helpful up to date weather and traffic? Not on FM radio, that is for sure! FM radio is sure to become obsolete. FM radio plays the same songs day after day and play endless commercials, and the traffic reports are terrible. It is nice to know if I am traveling across town or across the country, that I can get up to date and RELIABLE traffic and weather reports. I don't understand why the FCC or NAB has to tell us what to listen to. All I know is that XM is the best thing out there, and I will not miss FM radio at all! Oppose NAB's petition 04-160
